

60 MPH @ 3160 RPM  
@ 4.3:1

1 mile in 1 minute

$$\frac{5280 \text{ ft}}{2\pi r} \approx \frac{5.28 \times 10^3}{2\pi \frac{14}{12}} = 721 \text{ rev.}$$

~~NOW FIND REAL R:~~

$$\frac{3160}{4.3} = 735$$

$$r = \frac{5.28 \times 10^3}{2\pi NR} = \frac{5280}{2\pi 735}$$

$$r = 13.73 \text{ " SQUISHED.}$$

P. B. 7 4.3 ENV

4.27. Salisbury

Different Engine RPM,

same tires.  $3160 \times \frac{4.27}{4.3} = 3138$

650  $\rightarrow$  6.5" SECTION  
670  $\rightarrow$  6.7" WIDTH

OFTEN HAD  
ASPECT RATIO A.R.  
UP TO 92%

TIME DAM.

$$= \left( X\text{-SEC WIDTH} \times \frac{A.R.}{100} \right) \times 2$$

+ WHEEL DAM.

$$T.R. = 1372$$

$$\frac{(T.D. - U.D.)}{2 \times \frac{A.R.}{100}} = X - SEC W.$$

$$670 \times 16 \text{ HAD } 85 \text{ A.R. } \frac{280 - 16}{2 \times 9} \approx 6.7$$

possibly A.R. = 90 7

60 mph @ 28"

$$\frac{5280}{\pi \times 28} \times 12 = 720.3 \text{ ROTATIONS}$$

$\pi \times 28$

perhaps wheel diameter is  
measured on bench.

then W.D. = 28"

$$10 - 16 = 13.73"$$

could give SQUISHED
